

NEWSLETTER ARCHITECTURE

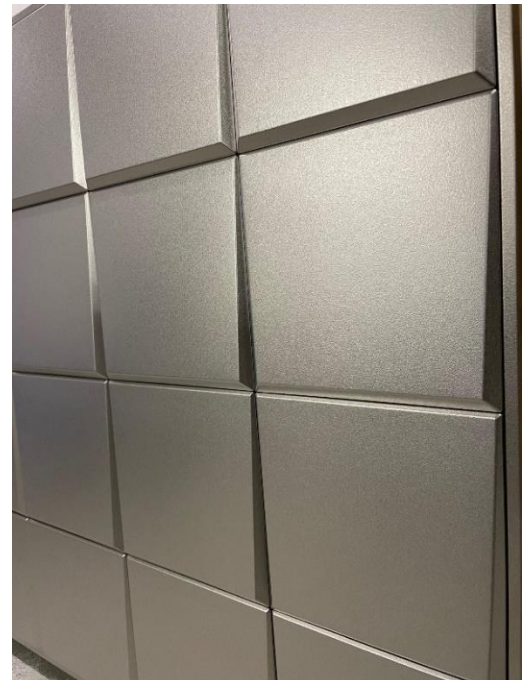

Pure titanium façade sheets are used on buildings of all kinds all over the world. This modern material has exceptional design properties. Due to the surface texture, many color nuances can be created. In addition, pure titanium sheets have excellent color reflection properties. Different light influences and solar radiation during the course of the day make the façade look different. A sophisticated property of titanium.

Signer Titanium AG is a distributor of pure titanium façade sheets for Nippon Steel Corporation of Japan. We provide comprehensive advice to interested architects and building owners when it comes to pure titanium façade sheets. We have a wide variety of illustrative samples available.

Since November 2020, we have been building a small **sample facade** as a mock-up, which we can present to interested architects and building owners. It can be easily transported for illustrative purposes and can be set up at different locations in different light conditions.

Please contact us at: info@signer-titanium.com or by phone at: +41 44 716 12 60.

For facades, roofs, ceilings and interior panelling

Mock-up - facade– XIUM Titan by IGKOGYO – ND20 –Roll-dull Finish - Silver

We have described the basic properties of pure titanium as a construction material in detail on our website and also compiled them in a flyer.

This is available for download at www.signer-titanium.com/en/architecture.
